Introduction

- help design or evaluate the
- participants organize topics into categories that make sense and label the groups.
- you can use actual cards, pieces of paper or digital tools
- generate a dendrogram (category tree) or folksonomy

Design Phases

Materials

- ▶ Sticky Notes
- ▶ Marker
- ▶ Flags
- ▶ Digital Apps (e.g. Miro)
- ▶ Pens, Pencils

Instructions

1. Individuals will be divided into groups of five at least
2. The oldest will serve as a moderator
3. Participants sort cards into categories given to them, and can create their own categories as well
4. The moderator will have to see to it that cards are sorted properly under respective groups
5. Arrange cards from most important to less important
6. Card sorting should be done within 10-20 minutes.

Instructions

Remarks, Tips and Limitations

- ▶ Limit the number of cards. It is tempting to want the participant to sort "ALL" of your content, but be mindful of participant fatigue. We would recommend 30 to 40 at the absolute outside, especially for an open sort.
- ▶ If possible, randomize the order of presentation so that each piece of content has a chance to be sorted earlier in the session.
- ▶ Provide the participants with an estimate of how long the card sort will take before beginning the session to help them better gauge the required time and effort.
- ▶ Consider the benefits of requiring participants to complete your sort. For an open sort, if possible consider requiring them to sort the cards, but perhaps not to label them, since that might be the more challenging part of the task, providing you have limited your items as suggested.
- ▶ Consider an open sort as part 1 and a closed sort as part 2 of your process. One allows you to learn what goes together, while 2 allows you to really test out your labels to see if they are intuitive to your participants.

Instructions

Remarks, Tips and Limitations

Limitations

- ▶ 1.the technique is quick but the analysis can take serious time
- ▶ 2.the results are so varied they're nearly worthless
- ▶ 3.Cards sorting may not go deep enough
